

Cloud Voice – Calling Line ID Blocking

1 What is it?

Block your Calling Line Identity (CLI) for all external calls or for individual external calls. People within your site will still be able to see your CLI.

2 How do I use it?

There are two options.

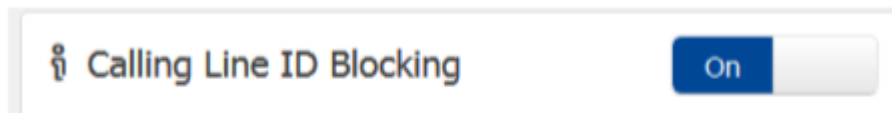

From your device

To **block the CLI from the next call you make** just dial the Feature Access Code (*67) before you make the call.

From the Cloud Voice portal

To block the CLI from **all calls**

1. Login to the [BT Cloud Voice portal](#)
2. Select '**Employees**', then select the particular employee
3. Select '**Features**' and toggle the '**Calling Line ID Blocking**' switch to the '**On**' position

Or alternatively, select the **Dashboard** from the left hand menu and toggle the '**Calling Line ID Blocking**' switch to the '**On**' position within the **Quick Feature Management** section

Dashboard
