

30 SECONDS TO SECURE

5 simple steps to protect your business

Changed your password recently?

Use strong, unique passwords that combine upper and lowercase letters, numbers and special characters.

Checked the message is legitimate?

Take a pause to make sure an email, text message or phone call is from a genuine source –especially if it's encouraging you to click a link or share sensitive information.

Updated your software?

Skipping the updates means skipping new security features. Be sure to always use the latest version.

Turned on multi-factor authentication?

MFA adds an extra layer of security in case your password is compromised.

Backed up your data?

An encrypted, cloud-based and up-to-date version of our data helps keep us protected from ransomware attacks.
