

Your calls, done your way

Get a more flexible phone system
with BT Cloud Phone

Get the features you need to make managing calls easy with BT Cloud Phone.

With Cloud Phone, you'll have everything you need to keep your team connected and on top of calls. And with different packages to choose from, you can pick the pack with the features that fit your business best.

Cloud Phone carries your calls securely over the internet using our broadband. And because voice takes priority over data (things like email and web browsing), they come through loud and clear. Our online portal helps you manage your calls. And our app lets you take them on your smartphone or computer, too. So, wherever business takes you, you'll always be one step ahead.

Stay flexible, save money

Cover every call

You can use a Cloud Phone desk phone, or an app on your computer or smartphone to take your calls. If you can't answer, you can set up a few rules to forward calls to colleagues. Or send them to voicemail. So the next time you're held up, you can keep things ticking over as usual.

Control your costs

With the option of unlimited UK calls, you can keep things affordable and predictable. It doesn't cost a penny for colleagues using Cloud Phone to call each other wherever they are in the UK. And being cloud based means there's less hardware to worry about. You'll never have to pay out for the latest software. Upgrades just happen automatically.

Keep things running, no matter what

Your business shouldn't stop just because you can't get into the office. If you find yourself working somewhere else or working on the move, you can use our app and online portal to manage your calls. You can still work with your colleagues, too. Set up a conference call, check who else is online to take a call, or use desk sharing to speed up decision making. All while sitting in a café, on a train, or wherever else you need to be.

Take the first step

You don't have to be a tech genius to get up and running with Cloud Phone. We've got all that covered. We'll do a quick check to make sure you have the right broadband connection to handle your calls and internet. Then we'll talk you through all the options.

Once you're set up, we can arrange a training call with you if you need a hand getting started.

1. Pick your feature packs and call plan

Our Basic user feature pack comes with 500 inclusive minutes for UK landlines and mobiles. It lets you work in the office and on the road. And if your business grows, you can easily add more packs.

Our Connect user feature pack can do things like automatic call recording and call monitoring. And it works with popular business applications and software like Skype for Business or Office 365. You'll get 24/7 support and the option of unlimited calls for UK landlines and mobiles.

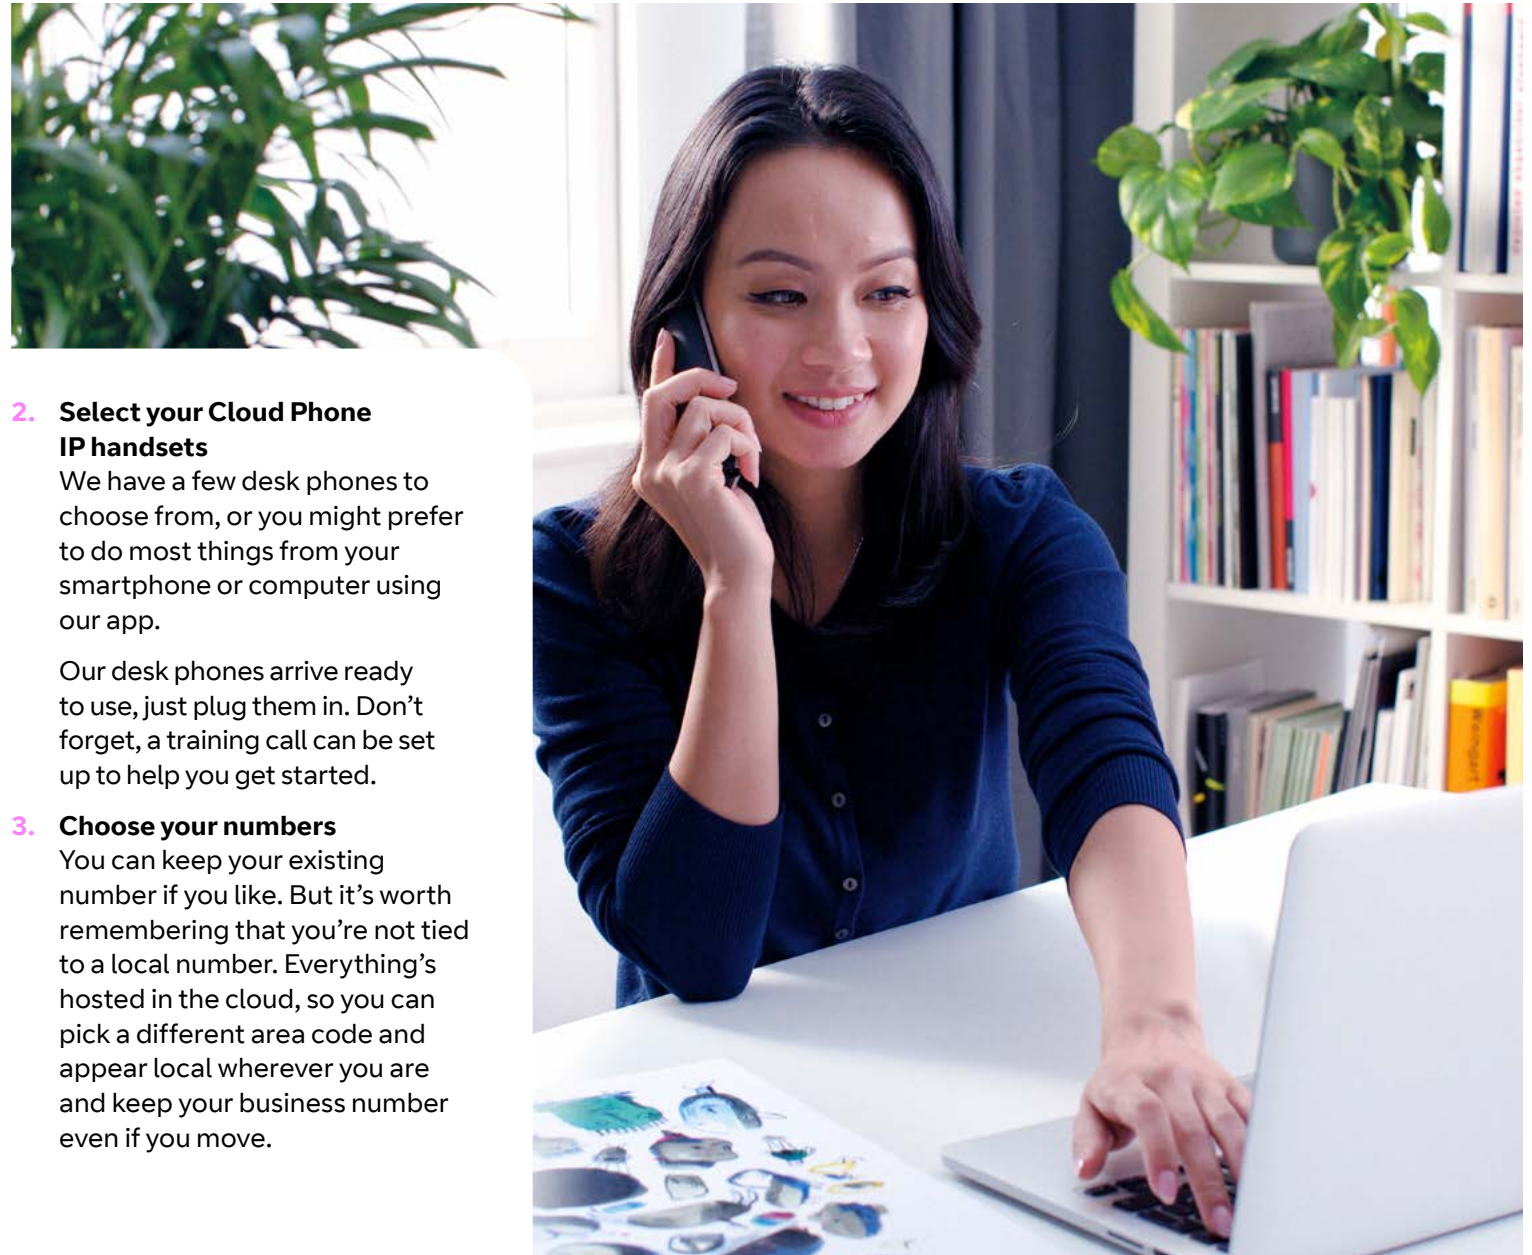

2. Select your Cloud Phone IP handsets

We have a few desk phones to choose from, or you might prefer to do most things from your smartphone or computer using our app.

Our desk phones arrive ready to use, just plug them in. Don't forget, a training call can be set up to help you get started.

3. Choose your numbers

You can keep your existing number if you like. But it's worth remembering that you're not tied to a local number. Everything's hosted in the cloud, so you can pick a different area code and appear local wherever you are and keep your business number even if you move.

There's more if you need it

Cloud Phone is perfect for small businesses looking to control their costs and stay flexible. But if you're looking for more, let us know. There's a whole load of other features to tell you about. Get in touch, or visit bt.com
