

# Simply safer

Secure entry systems that protect your people and property

## Easily protect what's hard to replace

Your colleagues. Your data. Your equipment. With one of our secure entry systems, looking after what matters most is much simpler.

### A safer, more productive office

Our systems let you speak to, or even see, visitors before you let them in. They work over your existing phones, allowing your teams to do everything from their desks. No running up and down stairs. Or cries of: "can someone let them in?". Perfect if you don't have a front desk or don't want the cost of running one.

### Tip-top security and service

Our experts can manage the whole process for you. From assessing your business, and helping you select the right system, to installation. There's even a three- or five-year maintenance contract for added peace of mind.

## Designed for different needs. And budgets.

### Visitor Phones

Our simple and convenient starter set. At the press of a button, visitors are connected to a set extension on your phone system. Your people can talk to them, or transfer the call to a colleague, before answering the door.

### IP Door Access Control System

If you're using IP phones, this is the one for you. It works in the same way as the Analogue Door Access Control System. But links to the latest IP phones. So your team can also see video from the unit on any device with IP video support.

### Analogue Door Access Control System

Our best selling system. There's a single button unit for visitors. Or a button and keypad for visitors and staff. Your team can talk to the visitor, and even let them in. Plus, a video upgrade is available.

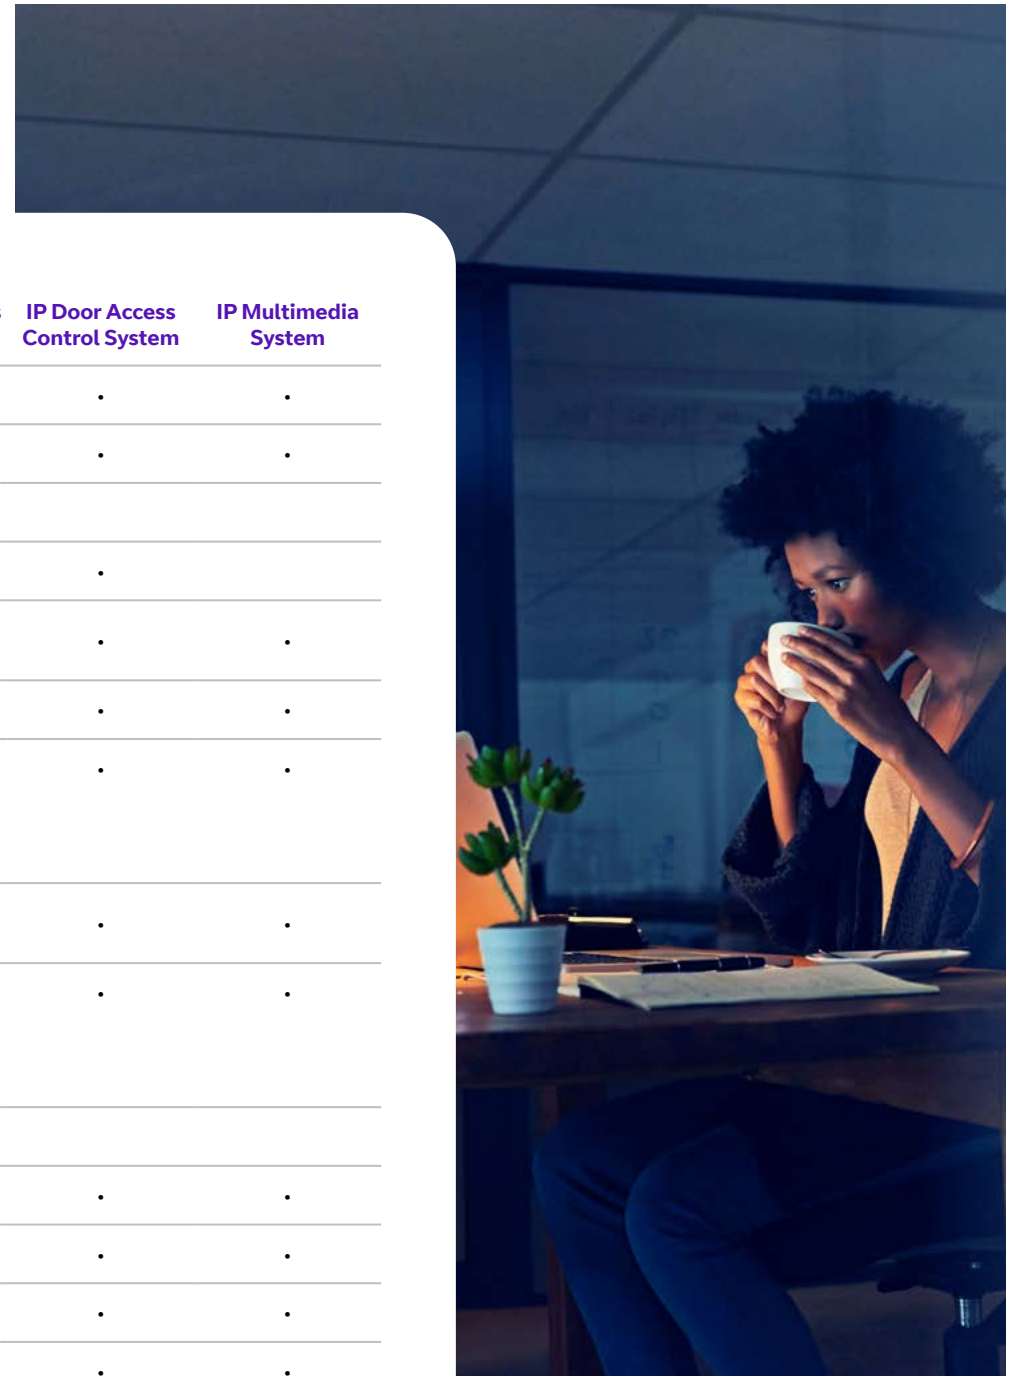

### IP Multimedia Information and Communication System

Our most powerful and versatile entry system. Talk to your visitors through an IP phone, mobile client or softphone. Get directory access using on-screen icons. Customise your navigation. And much more. Think of it as your virtual receptionist.

# See how our systems stack up

	Visitor Phone	Analogue Door Access Control System	IP Door Access Control System	IP Multimedia System
