# Remote Training Estate

## Challenges Identified

No eyes on base when lock and leave sites are unmanned

Guard resource can be a challenge over holiday periods.

Increased resource required to protect permitter given threat levels

Limited digital evidence captured.

Manning guardforce patrols are resource demanding as they require four guards

Inefficient use of guard's time which could impact their wellbeing
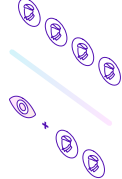

Solutions Delivered

Ability to install at very short lead times due to mobile connectivity

CCTV camera that provides eyes 247 on the base

Ability to monitor multiple sites from a single command and control center with mobile app providing eyes on base at any location securely

Ability to provide eyes on base, reducing guardforce patrols from 4 to 2 people
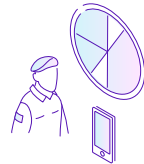

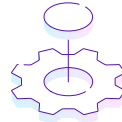

Fully accredited via DART accreditation process

Motion alerts for people not animals means guards are alerted when required not having to view 24/7
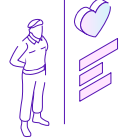

Highlights

Efficiencies
- Significant reduction in guard resources thanks to 24/7 CCTV capabilities.
- New skills developed through using Technology

Increased Productivity
- Reduced guardforce patrols allow guards to use their time more effectively for training.

Lived Experience
- Mental wellbeing benefits for guards – more fulfilling tasks.
- Digitised workstreams for soldiers.

Testimonial

"BT CCTV allows DIO to monitor the site 24/7 and DETECT an incursion and DEPLOY MDP or Local Police IoT DENY access to our Business-Critical Assets. Additionally, it provides situational awareness to the responder. The system has been of great use to the user community, reducing the number of personnel required to guard themselves whilst on site and reducing lost training time caused by these responsibilities."

C2, Security & Public Access Manager
