

Secure entry solutions from BT.

Keep your buildings secure and welcome visitors with a BT telephone system.

- Protect both staff and premises.
- Supervised access to your property.
- Give a more professional image.

A person is seen from behind, sitting on a high-rise balcony with a glass railing. They are looking out over a vast cityscape under a sunset sky with soft orange and blue tones. The city below is densely packed with buildings, and the horizon is visible in the distance.

Protection for buildings, people and assets.

Having an open door policy is not safe for your business. Visitors won't be aware of security or safety procedures and could be at risk in an emergency, or they might pose a threat to your workplace and people.

Every business wants to protect their expensive equipment and the critical data they rely on, so they need to avoid the likelihood of damage or theft. And BT can help. We offer a range of secure entry solutions for premises that are designed to help keep your offices and assets, as well as staff and personal belongings, safe. What's more, you can manage who you invite in to your office without even leaving your desk.

The benefits.

As well as protecting your buildings, equipment and people by having supervised access, there are lots of other ways you can benefit from having a secure entry solution.

Less interruptions – instead of staff having to leave what they're doing and go to the door every time someone arrives, they can speak to identify, and sometimes even see, visitors from wherever they are in the building. Depending on the system, your staff can also activate the door release.

An up to date system – by choosing BT, you can be confident that you're benefiting from innovative technology and the latest product design.

More choice – you have the flexibility to choose the security system that best meets your needs.

Save money – with no need for a dedicated receptionist, monthly outgoings could be reduced.

Hassle-free installation – we'll take care of everything, minimise downtime and make sure you have everything you need.

Present a more professional image – give visitors a more personal welcome and use the person's name when introducing them to colleagues.

Peace of mind – we offer three or five year maintenance contracts.

A system for every businesses' needs.

We offer four secure entry solutions for premises so there's something to suit every business.

1. BT Visitor Phone.

This is our entry-level system. Available in high gloss black and aluminum, our touch-sensitive visitor phones offer a convenient way to manage visitors from your BT desktop or Digital Enhanced Cordless Telecommunications (DECT) phone. The high gloss black has an illuminated call button so it's easier to see at night. The BT Visitor Phone connects to a BT telephone system in the same way as a regular analogue phone. When pressed, it calls a member of staff who can talk to the visitor or transfer the call to their colleagues, before they go to answer the door.

2. BT Door Access Control System.

A more advanced, intercom-based system with two options available – a single button unit for visitors only and a button and integral keypad for staff and visitors. Both connect to the BT telephone system as an analogue extension. When a visitor presses the buzzer, it calls an extension or group of extensions. Staff can answer, talk to the visitor and, if they're expected, activate the lock mechanism, allowing the visitor to come in. There's also a video upgrade that allows staff to see visitors on their computers.

3. BT SIP Door Access Control System.

The BT SIP Door Access Control System is available in aluminum and works in the same way as the BT Door Access Control System. It connects to the BT telephone system as a SIP extension¹ and supports SIP video. Images from the intercom unit can also be viewed on any device that supports SIP video as standard.

4. BT SIP Multimedia Information and Communication Unit.

Our top of the range solution gives you a virtual receptionist. It's a powerful multimedia door phone, allowing people to communicate and see each other via an IP phone, mobile client, or softphone. It's user-friendly and you can access lots of great functionality through on-screen icons and buttons. They can scroll directories, use keypads and see images. The navigation options can even be customised to suit an individual business and is ideal for multilingual applications.

1. May require a SIP endpoint licenses on some BT PBXs – please ask for confirmation.

Features at-a-glance.

To help you choose a system that's best for you, we've included a handy table below making it easier to compare the features of our entry level and more advance solutions.

	BT Visitor Phone	BT Door Access Control System	BT SIP Door Access Control System
