

BTnet and Cisco Meraki

Your solution for business-grade internet
and wireless networking

Keep your workforce connected

The modern workplace can present a huge challenge for businesses and their IT departments

With a rise in employees using their own devices and working wirelessly, there's more pressure than ever to make sure that everyone can get securely connected when they need to. And then there's also guests and visitors to consider. They need to get online, but can't be connected to the regular corporate network.

The problem is that traditional networks and internet connections weren't built with these challenges in mind. Before you know it, you're paying for multiple broadband lines to give you the bandwidth you need and buying expensive hardware that requires an engineer to install, configure and maintain.

That's where BT comes in. We've been working with Cisco and their Meraki wireless networking solutions to truly mobilise your workplace. Combined with our BTnet leased line internet connection, we've come up with an end-to-end solution that's easy for the customer to manage, is easily scalable and delivers increased efficiency and productivity.

Embrace agile working

Embracing digital transformation isn't always easy. But allowing your employees to connect wireless devices, work anywhere in your office and take calls on mobile can increase productivity (and profits) . With BTnet and Cisco Meraki, you'll have a wireless networking solution designed for the most demanding of agile working environments and a dedicated internet connection that can handle heavy use of modern cloud applications.

Reduce your IT overhead

As employees' demands for digital flexibility increase, the workload of your IT department does too.

If you're a medium sized business, you may not have a large department to handle this. If you're a larger organisation and manage internet connections across multiple sites, then you'll have your own challenges. With BTnet and Meraki, you can take the strain off of your IT department and reduce your overheads as a result.

With Meraki's cloud based management tools, you can control every aspect of your wireless network, wherever you are. With powerful insights into how your network is used and proactive issue identification, you can do more with less.

With BTnet, you can combine multiple broadband lines and even PSTN or ISDN telephone lines into a single 'pipe'. With only one connection to manage – and only one supplier to deal with – you'll spend less time juggling incompatible contracts, and more time focusing on your core business. You'll also have the best SLAs on the market, so you won't have to worry about any problems if your connection goes down.

Why BTnet and Meraki?

High performance.

Combining BTnet's dedicated internet connection with Meraki's superior cloud-based wi-fi capabilities gives you a network solution you can truly rely on. BTnet comes up with an industry-leading 100% target availability SLA (so you know we mean business) while Meraki hardware is built for performance – delivering superfast internet to every connected device.

Easy-to-use.

With your wireless LAN powered by Meraki, you can manage every aspect of your wireless network, across all your sites, from an easy-to-use, web based dashboard. You'll also have full visibility of your network. And, when we provide both your BTnet leased line and Meraki hardware, we can make sure everything's set up and working seamlessly from day one.

Always up to date.

Updates to your Meraki wireless network are automatically sent via the cloud, so there's nothing for you to do. Sit back and relax knowing that your network is constantly secured against the latest threats.

Total network control.

With Meraki's easy-to-use dashboard, you can prioritise certain traffic, like voice over IP calls (VOIP), to make the most of all that bandwidth. Giving you full control without having to wait for costly engineers.

Secure.

Meraki's firewall makes it easy to control guests and manage access to your main corporate network. With a suite of next-generation capabilities, including content and web filtering, you gain full control over what your employees can see and do online. And Meraki's advanced threat capabilities give you the confidence your network is secure.

Supported by experts.

We're the industry's experts in networking, and our unique partnership with Cisco means we can do even more for you and your business. We'll make sure we give you the right solution for your needs, and our BT engineers will deliver a smooth installation too.

Perfect for multiple sites.

With Meraki's seamless management portal, it's easy to add new sites and administer existing ones at the click of a button.

BTnet – a dedicated internet connection without compromise

When you can't compromise on a fast and reliable internet, BTnet gives you a dedicated connection that keeps your business online. Unlike more traditional connections, where a single 'pipe' may be shared between other businesses in your area, a BTnet leased line handles only your traffic. That means you get broadband with uncontended bandwidth, capable of handling the most demanding of business applications.

Having a fast internet connection is great – but it's worthless without guaranteed uptime. With BTnet, we offer a market-leading 100% target availability SLA, keeping you connected at your businesses' most critical moments. And, if you ever need help, our experts are available 24/7, 365 days a year.

Having a dedicated internet connection needn't cost the earth either. In fact, we often find that customers can save money by replacing old systems with multiple traditional broadband lines, or running other services like Voice over IP calls through their BTnet connection. Better still, with BTnet, you only pay for what you need – so you can scale your connection up or down depending on usage and demand.

Combined with Meraki wireless networking, BTnet makes sure that every one of your employees can get online, with whichever device they're using, and do the work they need to do without having to worry about connectivity issues.

Cisco Meraki – best-of-breed wireless networking for your business

With a workplace full of employees connecting their wireless devices, and the need to ensure guests can quickly connect to the internet when they visit, wireless networking in the office has moved well beyond a single router. Now, IT managers are struggling with expensive wi-fi controllers and complex software setups to keep everyone connected. That's where Meraki comes in.

Meraki is a cloud managed, wireless networking solution. Combining best-of-breed hardware with an intuitive online interface that gives you full control over every aspect of your setup. With Meraki, there's no need to call a specialist or arrange a visit to configure your network on a new site, everything can be managed remotely.

Where traditional systems might cause friction as your needs change, Meraki's cloud-based solution allows you to make the most of your wireless network and internet connection. Its dashboard gives you full visibility over how your network is being used, all the way down to the individual user. Meaning you can prioritise the web traffic that matters and ensure that everyone connected can do the work they need to do.

Combined with BTnet, Meraki gives you a secure end-to-end solution that enables your employees to work anywhere in your workplace, on any device, without interruption. Not only that, but with everything you need to manage your network in the cloud, you'll save time and money too.

Your trusted partner for unrivalled internet and network

With our industry-leading partnership with Cisco, and unparalleled technical expertise, we can work with you to create a solution that meets all your internet and networking needs.
