

Securing a move to the cloud with a managed security service

How we helped protect one of the UK's largest emergency services

A nationwide emergency service with more than 123,000 employees was undergoing a massive IT transformation program. They discovered their IT legacy systems weren't fit for purpose and needed help to move to a cloud-based service – without any interruption to their operations. And, more importantly, without putting their highly sensitive data at risk.

We provided an integrated solution that included threat intelligence, 24/7 monitoring from our Cloud Security Information and Event Management (CSIM) service, a vulnerability assessment and malware analysis. This combined approach gave them early visibility of cyber-attacks through a combination of advanced correlation technology, intelligence gathering and analysis by our security experts.

Key benefits

- Improved productivity
- Identify and block potential threats
- Protect intellectual property
- Secure internet access
- More flexibility and effectiveness
