

Increase network flexibility and cut costs as you protect your data

How our security solutions have helped a London Borough council

A London council covering more than 340,000 residents approached us to talk about the digital security challenges they faced. Unhappy with their current network provider, they needed upgrades to their WAN and LAN, and a way to enable their staff to work remotely. And they needed the changes to be as cost-effective as possible for their residents.

Already having a good relationship with us through other services we

provide them with, they trusted us to give them an integrated solution. We delivered this with Managed Firewall, DDOS and Zscaler services.

By identifying their key challenges and how security affected them, we were able to give them scalable security solutions with speed, flexibility and cost-saving benefits, backed by our wealth of experience and expertise.

Key benefits

- Better protection for your network infrastructure.
- Threats detected earlier, and responded to faster.
- An integrated solution, from one provider.
- Employees can work remotely and securely.
- Improved relationship with your provider.
- Visibility of your system health and threat activity, giving you peace of mind.
- Less down-time means you can spend your time and resources where they're most needed.
