Secure your cloud and protect your people

How our security solutions moved a rail network to the cloud

West Midlands Trains is responsible for 1,300 services a day and employs 2,800 people. It’s vital that the team can work from anywhere, without compromising security. They needed a cloud-based solution that would keep their services running efficiently, while increasing security. The solution was Zscaler’s Internet Access Transformation bundle.

It’s simple to use and easy to control. Managers have complete visibility through a single portal that offers real-time scanning of all users, locations and devices. They can use the data to identify any weaknesses in the network, make changes and block anything that looks malicious.

“BT’s approach was totally professional. They understood our business, the security landscape and exactly what we should be doing.” Steve Roberts, Head of IT, West Midlands Trains

Key benefits

- Processed 390.8 million transactions
- Processed 21.8TB of traffic
- Prevented 14.7 million policy violations
- Blocked 86,000 security threats
- Spotted and blocked 92,000 threats hidden in encrypted traffic
- All within three months
