The Cloud UC system of choice

Use the flexibility of the MiCloud UC to give customer service and productivity a boost
Better 
communication 
and collaboration 
can lead to 
great things

Successful businesses rely on good 
communication. With the secure MiCloud UC 
cloud-based unified communications platform, 
your teams will have the flexibility to effortlessly 
communicate with customers – and each other. 
Conference calling. Desktop sharing. Mobile apps. 
And more. All to help them stay in touch, wherever 
they’re working.

It’s all possible because everything’s hosted in 
the cloud. With a team of experts looking after 
security, and automatic tech updates. So you 
don’t have to worry about a thing.
Get it right for your customers and teams

Built for you and the future
Businesses change daily. So you need a Cloud UC system that can flex as your work does. MiCloud UC lets you mix and match features for your different teams. For example, your desk-based people get the basics. While your field sales team get the tools to work on the go. What’s more, you can make feature changes 24/7 using the online portal.

More sales. Happier customers.
Customers demand quality service. And that means giving them options when they want to reach you. From calls and emails to web chats and SMS. The optional Contact Centre (MiCloud CC) gives you the flexibility to easily do it all.

It also gives your agents the tools they need to get closer to your customers. Such as giving them real-time information by combining it with your CRM and other business applications. Plus, it can track, record and manage multiple communications. Making it simpler for them to view a whole case, and easier for you to find out what is and isn’t working.

But that’s not all. You can personalise messages to customers. Let callers know how long they’ll be waiting. See who’s calling and why, so they reach the right person first time. Even make sure calls are answered quickly by setting up several phones to ring from a single number. And so much more.
Get the peace of mind that comes from our expertise

Phone systems and the cloud. Our experience in both is unrivalled. We'll use it to help you every step of the way. From picking the right solution and installation, to billing and ongoing support. Our UK-based experts and engineers are there for you.

Here’s how it all works

The platform sends what you say, and your data traffic, over your BT network connection. So you can make calls using a desk phone or a computer and headset, and all your teams get the same functionality. Wherever they work.

We run it all from secure, geo-resilient dual data centres as standard. MiCloud UC and CC also offer dual access points to the PSTN, adding a further layer of resilience.

One supplier, a choice of numbers

To use MiCloud UC, you’ll need BT Broadband, BTnet or BT MPLS (IPCUK). You’ll get BT One Voice SIP bundled in; choose a prearranged number of channels (Packaged SIP) or the exact number you need (Unpackaged SIP). What’s more, you can select new numbers or move your existing ones to keep things consistent for your customers.
Giving your teams the tools to work smarter

Unified communications (UC) offer you more ways to talk to your customers, suppliers – and each other. To give productivity and customer service a boost.

**Save time on arranging meetings**
Presence lets you quickly find out who’s available and who’s out of the office. So you can decide on the best way to reach them.

**Work more efficiently**
With instant messaging, you can ask a colleague a quick question, even when you’re on the phone.

**Receive your messages, your way**
Check voicemails, fax and call recording services on your desktop or mobile app. You can even receive voice messages as audio files by email.

**Easily schedule a conference call, from anywhere**
Then chat using the desktop or mobile app. The choice is yours.

**Avoid interruptions**
Ensure people only contact you when you’re free. Simply synchronise your presence info with a Microsoft Exchange calendar.

**Get the same features from anywhere**
You can use key collaboration tools from any internet-connected computer. And get all the same phone features you can access in the office using a software-based IP phone (softphone).

**Enjoy more privacy**
Get a single number to ring on the devices you want – including your personal mobile phone.

**Work smarter everywhere**
With the MiCloud UC iOS or Android app, you can use the features wherever you are. From redirecting your calls to someone else when you’re not available, to quickly finding somebody using the office directory.
