

Are you security savvy?

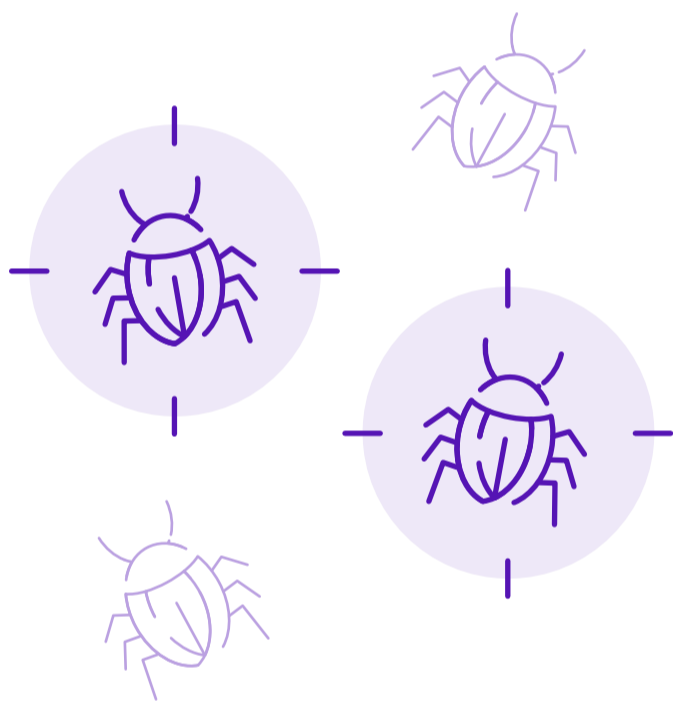

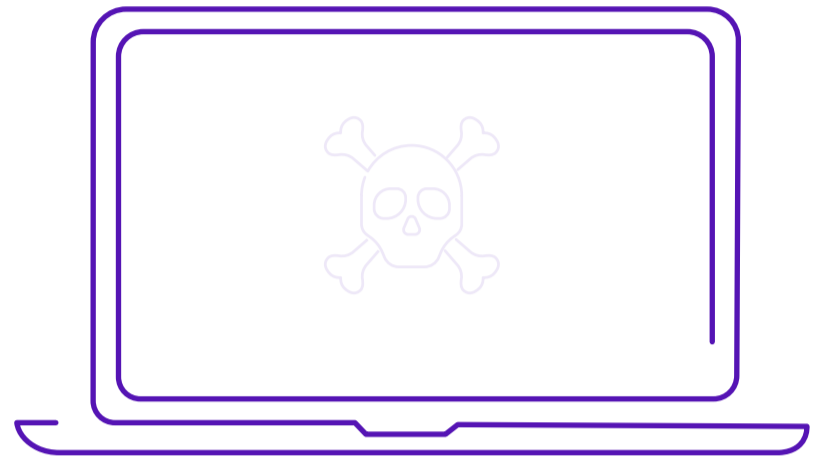

Let's make life difficult for cybercriminals

Businesses have been busy finding new ways to adapt and grow. Moving operations online to keep the tills ringing and switching to cloud services to work from home and on the go. But how many have adapted their security services along the way? Unintended security gaps are an open door for cybercriminals. Here are some key stats and trends we're seeing today.

1 The risk is real

55% of UK firms have already faced a cyberattack¹

And the damage can take years to recover from – the average cyberattack costs businesses £176k¹.

2 It's easy to outgrow your current security arrangements

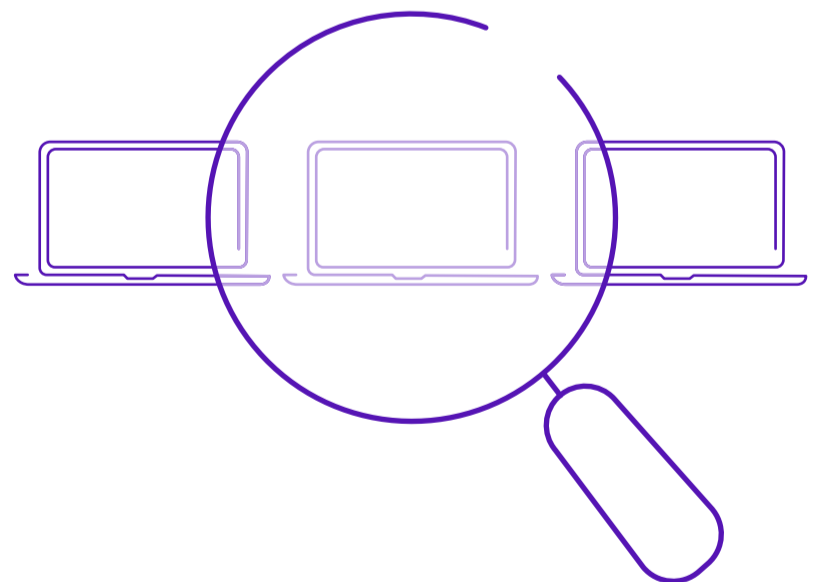

53% of malicious attacks are missed by existing tools²

That's well below the predicted levels of security effectiveness. As businesses try out new technologies and ways of working it's easy to forget to adapt security arrangements and stay protected. And that's where the gaps start to show.

3 Businesses are beginning to spot the gaps

76% of UK CEOs see cyber risks as a significant threat³

But many continue to take a reactive rather than proactive approach to cybercrime.

Stay safe on your digital journey

We've been protecting customers for more than 70 years. So whatever the future brings, you'll always be a step ahead and in control. If you're at the start of your journey, we'll give you the solutions and guidance you need to keep your business safe and steer clear of regulation woes.
